Click the **start button** and type in *mini* in the search bar. An option for burn Minitab CD should be displayed as either the top or the second option. Click it to open the shortcut.

You should see a similar window appear. Verify the options selected, **verify mode** will check the disk after burning for accuracy. Make sure to insert a disk into the disk drive and then click the **Write icon button** shown above.
Once completed a message may appear about the drive not re-inserting. This happens on computers with slim line drives, all that is needed is to close the drive tray and click the OK button.

Once completed and optionally verified, a popup box will appear. Click OK and your CD should be successfully created.
